STARCORE INTERNATIONAL MINES LTD.

MANAGEMENT DISCUSSION & ANALYSIS

For the period ended July 31, 2022

1. **Date of This Report**

This MD&A is prepared as of September 13, 2022.

This Management Discussion and Analysis (“MD&A”) should be read in conjunction with the unaudited consolidated financial statements of Starcore International Mines Ltd. (“Starcore”, or the “Company”) for the period ended July 31, 2022.

Monetary amounts throughout this MD&A are shown in thousands of Canadian dollars, unless otherwise stated.

This MD&A includes certain statements that may be deemed “forward-looking statements”. Such statements and information include without limitation: statements regarding timing and amounts of capital expenditures and other assumptions; estimates of future reserves, resources, mineral production and sales; estimates of mine life; estimates of future mining costs, cash costs, mine site costs; estimates of future capital expenditures and other cash needs, and expectations as to the funding thereof; statements and information as to the projected development of certain ore deposits, including estimates of exploration, development and production and other capital costs, and estimates of the timing of such exploration, development and production or decisions with respect to such exploration, development and production; estimates of reserves and resources, and statements and information regarding anticipated future exploration; the anticipated timing of events with respect to the Company’s minesite and; statements and information regarding the sufficiency of the Company’s cash resources. Such statements and information reflect the Company’s views as at the date of this document and are subject to certain risks, uncertainties and assumptions, and undue reliance should not be placed on such statements and information. Many factors, known and unknown could cause the actual results to be materially different from those expressed or implied by such forward looking statements and information. Such risks include, but are not limited to: the volatility of prices of gold and other metals; uncertainty of mineral reserves, mineral resources, mineral grades and mineral recovery estimates; uncertainty of future production, capital expenditures, and other costs; currency fluctuations; financing of additional capital requirements; cost of exploration and development programs; mining risks, risks associated with foreign operations; risks related to title issues; governmental and environmental regulation; and the volatility of the Company’s stock price. Investors are cautioned that any such statements are not guarantees of future performance and that actual results or developments may differ materially from those projected in the forward-looking statements.

2. Overall Performance

Description of Business

Starcore is engaged in exploring, extracting and processing gold and silver through its wholly-owned subsidiary, Compañía Minera Peña de Bernal, S.A. de C.V. (“Bernal”), which owns the San Martin mine in Queretaro, Mexico. The Company is a public reporting issuer on the Toronto Stock Exchange (“TSX”). The Company is also engaged in acquiring mining related operating assets and exploration assets in North America directly and through corporate acquisitions. The Company has interests in properties which are exclusively located in Mexico and Canada.

Financial Highlights for the three month period ended July 31, 2022:

- Cash and short-term investments on hand is \$9.5 million at July 31, 2022 compared to \$8.8 million at April 30, 2022;
- Gold and silver sales of \$6.8 million for the period ended July 31, 2022 compared to \$6.2 million for the period ended July 31, 2021;
- Earnings from mining operations of \$1.0 million for the period ended July 31, 2022 compared to earnings of \$1.6 million for the period ended July 31, 2021;
- Loss of \$0.7 million for the period ended July 31, 2022 compared to earnings of \$0.9 million for period ended July 31, 2021;
- Equivalent gold production of 2,925 ounces in the period ended July 31, 2022 compared to production of 2,895 ounces in the period ended July 31, 2021;
- Mine operating cash cost is US\$1,272/EqOz for the period ended July 31, 2022 compared to cost of US\$1,177/EqOz for the period ended July 31, 2021;
- All-in sustaining costs of US\$1,398/EqOz for the period ended July 31, 2022, compared to costs of US\$1,387/EqOz for the period ended July 31, 2021;
- EBITDA⁽¹⁾ of \$599 for the period ended July 31, 2022, compared to \$1,879 for the period ended July 31, 2021.

Reconciliation of Net Income to EBITDA⁽¹⁾

For the period ended July 31,	2022	2021
Net income (loss)	\$ (657)	\$ 935
Loss on Toiyabe	-	39
Unrealized loss on investment	103	-
Income tax expense	166	80
Interest	-	44
Depreciation and depletion	987	781
EBITDA	\$ 599	\$ 1,879
EBITDA MARGIN⁽²⁾	8.9%	30.5%

(1) EBITDA (“Earnings before Interest, Taxes, Depreciation and Amortization”) is a non-GAAP financial performance measure with no standard definition under IFRS. It is therefore possible that this measure could not be comparable with a similar measure of another Corporation. The Corporation uses this non-GAAP measure which can also be helpful to investors as it provides a result which can be compared with the Corporation market share price.

(2) EBITDA MARGIN is a measurement of a company’s operating profitability calculated as EBITDA divided by total revenue. EBITDA MARGIN is a non-GAAP financial performance measure with no standard definition under IFRS. It is therefore possible that this measure could not be comparable with a similar measure of another Corporation. The Corporation uses this non-GAAP measure which can also be helpful to investors as it provides a result which can be compared with the Corporation market share price.

Recent Events

Starcore Reports Mineral Reserves and Resources of 175,652 Ounces of Gold Equivalent.

The “Company released its updated NI 43-101 reserve and resource estimates to April 30, 2022 for its San Martin Mine, located in Queretaro State, Mexico. The report has been filed on SEDAR and is also available on the Company’s website www.starcore.com.

Highlights

- San Martin Proven and Proven Mineral Reserves decreased 24% to 82,559 ounces (“oz”) of contained equivalent gold, exclusive of Mineral Reserves.
- San Martin Indicated and Inferred Mineral Resources decreased 21% to 93,092 oz of contained equivalent gold.
- San Martin exploration success offset 36 months of mining depletion, with Mineral Reserves essentially maintained at 175,652 oz of contained equivalent gold representing five-plus years of mine life.

San Martin Mineral Reserve and Mineral Resource Update

Exploration at San Martin continues to deliver significant resource growth. The current update incorporates 22,359 metres of drilling from April 2020 to the April of 2022. Initial results from 2020 and 2022 exploration are very encouraging and it is expected to reach the areas detected with diamond drill holes this year and by the middle of 2023.

Ongoing efforts at San Martin are focused on resource growth at the Area 28 and Area 33 ore bodies, as well as the conversion of Mineral Resources to Mineral Reserves with underground mine workings and via metallurgical test work studies. These activities are expected to confirm a significant increase in the San Martin mine life.

San Martin Proven and Probable Mineral Reserves as of April 30, 2022, are estimated at 1,348,433 tonnes grading 1.74 grams per tonne (“g/t”) gold and 13 grams per tonne silver, for 82,559 oz of contained equivalent gold (Table 1). The 24% decrease from the previous estimate is attributable almost entirely to mining depletion of 52,467 oz of gold equivalent from April 30, 2019 to April 30, 2022.

San Martin Indicated and Inferred Mineral Resources, exclusive of Mineral Reserves, have decreased by 21% to 1,346,899 tonnes grading 1.81 g/t gold and 14 g/t silver for 86,074 oz of contained gold equivalent (Table below).

Starcore’s updated mineral reserve and resource estimate for San Martin contains 13% lower tonnes with 4% lower grades compared to the previous reserve/resource estimate of 2019. This was largely due to Starcore using more conservative estimation parameters consistent with the reserve/resource estimates for the San Martin mine.

Total Reserve and Resources of 175,652 ounces of gold equivalent, decreased by 22%. This is due to normal mining depletion and exploration with mine workings reflecting less mineral than the one considered in some original blocks. All assumptions are listed at the bottom of the reserve and resource table in ***Results of Operations – San Martin Mine, Queretaro Mexico - Section 4.1 below.***

Erme Enriquez C.P.G., BSc, MSc., is an independent consultant to the Company. He is a qualified person on the project as required under NI 43-101 and has prepared the technical information contained in this press release.

3. Selected Annual Information

The highlights of financial data for the Company for the three most recently completed financial years are as follows:

<i>Twelve Months Ended</i>	April 30, 2022	April 30, 2021	April 30, 2020
Revenues	\$ 25,679	\$ 26,799	\$ 24,820
Cost of Sales	(20,373)	(20,397)	(22,836)
Earnings from mining operations	5,306	6,402	1,984
Administrative Expenses	(3,878)	(3,843)	(4,396)
Loss on Toiyabe	(40)	(1,116)	-
Loss on investment	(287)	-	-
Royalty sale	1,600	-	-
Write off Altiplano	-	-	(39)
Income tax (expense)/ recovery	(296)	1,449	(1,178)
Total income/ (loss)			
(i) Total income/ (loss)	\$ 2,405	\$ 2,892	\$ (3,629)
(ii) Income/ (loss) per share – basic	\$ 0.05	\$ 0.06	\$ (0.07)
(iii) Income/ (loss) per share – diluted	\$ 0.05	\$ 0.06	\$ (0.07)
Total assets	\$ 52,041	\$ 46,471	\$ 54,413
Total long-term liabilities	\$ 8,225	\$ 7,531	\$ 10,855

4. Results of Operations

Discussion of Acquisitions, Operations and Financial Condition

The following should be read in conjunction with the consolidated financial statements of the Company and notes attached thereto for the period ended July 31, 2022.

4.1 San Martín Mine, Queretaro, Mexico

The San Martin Mine, located approximately 50 km east of the City of Queretaro, State of Queretaro, Mexico, consists of mining concessions covering 13,077 hectares and includes seven underground mining units and four units under exploration. Luismin (now “Goldcorp Mexico”) operated the mine from 1993 to January, 2007, when it was purchased by the Company. The Company expects to continue to operate the mine based on the current expected conversion of known resources, and exploration is able to maintain proven and probable reserves replacing those mined with new reserves, such that the total resource remains relatively constant from year to year.

Starcore has staked additional claims near its principal producing gold property, the San Martin gold mine, in Querétaro, Mexico. The geology department has completed a staking initiative that includes new claims to the west of the current mineral rights of the San Martin mine on private property, that holds exploration and development upside.

Reserves

The Company completed a Resource estimate “RESERVES AND RESOURCES IN THE SAN MARTIN MINE, MEXICO AS OF APRIL 30, 2022”, as filed on August 29, 2022, prepared by Erme Enriquez. (the “Technical Report”), which is also available on the Company website www.starcore.com. All assumptions are listed at the bottom of the reserve and resource table below.

Starcore International Mines, San Martin Mine Mineral Reserves and Resources As of April 30, 2022:

Category	Tonnes	Grade		Total Contained oz		
		(g Au/t)	(g Ag/t)	(oz Au)	(oz Ag)	(Au Eq oz)
Total Proven & Probable	1,348,433	1.74	13	75,353	573,257	82,560
Total Inferred + Indicated	1,481,770	1.78	14	84,999	643,744	93,092
Total Ounces Contained	2,830,203	1.76	13	160,352	1,217,001	175,652

1. Reserve and Resource cut-off grades are based on a 1.41 g/t gold equivalent.

2. Metallurgical Recoveries of 86% gold and 55% silver.

3. Minimum mining widths of 2.0 meters.

4. Dilution factor of 20%.

5. Gold equivalents based on a 1:79.5 gold:silver ratio.

6. Price assumptions of \$1750 per ounce for gold and \$22 per ounce for silver.

Erme Enriquez C.P.G., BSc., MSc., is an independent consultant to the Company. He is a qualified person on the project as required under NI 43-101 and has prepared this technical information.

Production

The following table is a summary of mine production statistics for the San Martin mine for the three months ended July 31, 2022 and 2021 and for the previous year ended April 30, 2022:

(Unaudited)	Unit of measure	Actual results	Actual results	Actual results
		3 months ended 31-Jul-22	12 months ended 30-Jul-21	12 months ended 30-Apr-22
Mine production of gold in dore	thousand ounces	2.7	2.6	10.0
Mine production of silver in dore	thousand ounces	18.6	19.8	85.4
Total mine production – equivalent ounces	thousand ounces	2.9	2.9	11.2
Silver to Gold equivalency ratio		86.0	68.1	75.0
Mine Gold grade	grams/tonne	1.70	1.64	1.58
Mine Silver grade	grams/tonne	21.3	20.9	23.0
Mine Gold recovery	percent	89.4%	88.3%	88.2%
Mine Silver recovery	percent	49.1%	52.1%	51.4%
Milled	thousands of tonnes	55.3	56.3	224.4
Mine development, preparation and exploration	meters	1,907	1,838	7,474
Mine operating cash cost per tonne milled	US dollars/tonne	67	61	62
Mine operating cash cost per equivalent ounce	US dollars/ounces	1,272	1,177	1,239
Number of employees/contractors at minesite		248	244	253

During the quarter ended July 31, 2022, the mill operated at a rate of approximately 621 (July 31, 2021: 612) milled tonnes/day. Gold and silver grades during the quarter ending July 31, 2022 were 1.70 g/t and 21.3 g/t, respectively, compared to the prior quarter ended July 31, 2021 comparable grades of 1.64 g/t and 20.9 g/t, respectively. Overall equivalent gold production from the mine during the period ending July 31, 2022 of 2,925 equivalent ounces was higher than the prior period's production of 2,895 due to slightly higher ore grades and gold recovery despite slightly lower tonnes processed during the current period. Overall development meters have increased in the current period, to 1,907 meters, compared to

1,838 meters in the prior period ended July 31, 2021. The development has been consistent with the current calendar period production tonnage budgeted.

Production cash costs of the mine for the period ended July 31, 2022 were higher at US\$1,272/EqOz compared to US\$1,177/EqOz in the prior comparable period ending July 31, 2021 due mainly to lower milled tonnes and higher per ton costs in the current period. Overall cost per tonne averaged US\$67/t, compared to US\$61/t in the prior period due mainly to higher input costs for labour, electricity and fuel in the current period coupled with higher development costs per meter and to a less favourable exchange rate. The mine plan has been developed to ensure the mine is properly developed and mined so as to ensure a constant supply of ore in accordance with currently planned production capacity and ore grades. Changes to the plan that may involve production and capital investment are continually being assessed by management. Currently, the Company is continuing underground exploration in order to identify higher grade ore zones and has allocated an adequate budget to support year-long exploration.

During the quarter ended July 31, 2022, the Company incurred approximately US\$275 in mine capital expenditures, which includes mine development drifting and drilling, machinery and equipment leases and purchases, and construction and tailings dam remediation, compared to US\$332 in the prior comparable quarter ending July 31, 2021.

4.2 Property Activity

Starcore Announces US\$2 Million Exploration Program for 2022

Starcore is pleased to announce that its Board of Directors has approved a US\$2 million exploration budget for its most prolific projects.

Firstly, Starcore has budgeted US\$500,000 for El Creston, an advanced moly project located in Opodepe, Sonora Mexico, where Starcore will inject US\$500,000 for studies to confirm the presence of a copper porphyry at depth. The program will include surveys, geophysical studies of magnetometry, and the development of new geological models from existing drillhole data.

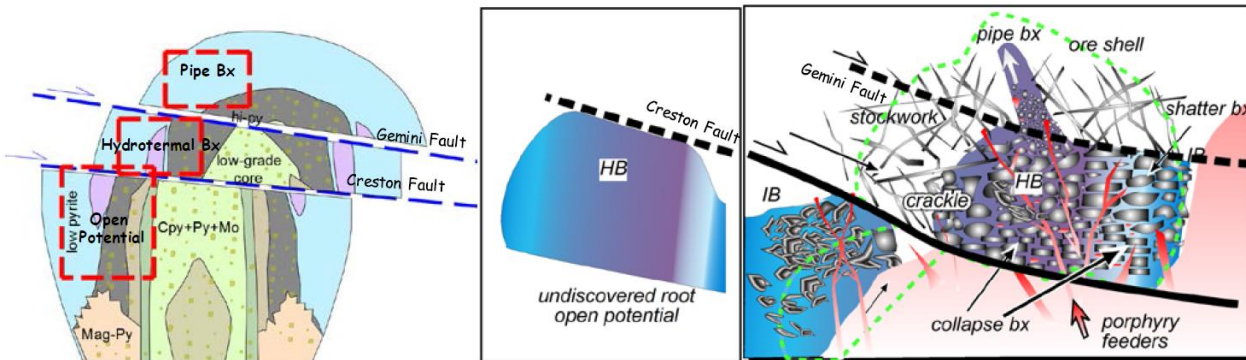

Fig 1) Zoom Model Lowell & Guilbert, 1970, representing geologic model of El Creston Porphyry Mo-Cu, and the open potential deep HB. (HB: Hydrothermal Breccia; IB; intrusive Breccia).

Secondly, a budget of US\$1 million has been allocated for the San Martin Mine concession with the following objectives:

- a. To search for the extension of the San Martin Breccia in the southwest and eastern part of the mine

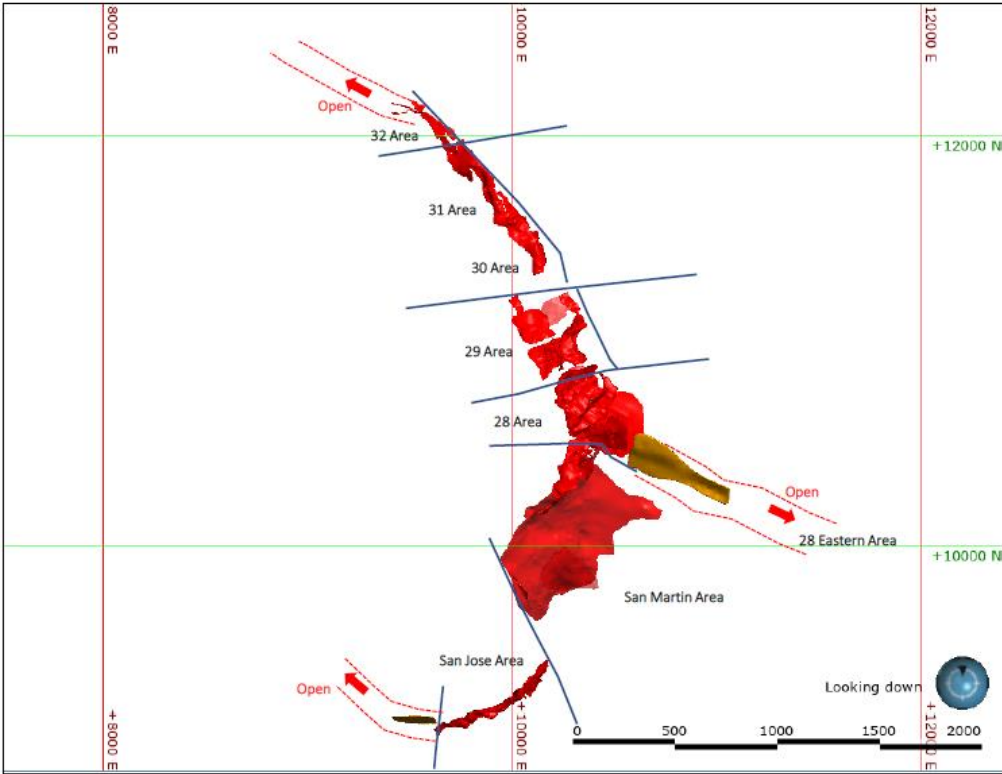

Fig 2) Geological Model San Martin Breccias, representing Eastern and Southern part of the deposit.

b. To confirm the geological potential of the north part of the concessions in the areas of Cerro Azul (North Area)

Fig 3) Claim Map representing Cerro Azul Area.

Lastly, the balance of the exploration budget of US\$500,000 will be allocated towards new opportunities where Starcore has been invited to participate in potential joint ventures, such as the gold and silver project called California located in Durango, Mexico, a concession of 3, 211 hectares, which is part of the mineralization trend of the San Dimas District.

Fig 4) California claim - a new target of Starcore International Mines

Fig 5) Schematic mineralized band in Longitudinal Section of California Vein

Salvador Garcia, B. Eng., a director of the Company and Chief Operating Officer, is the Company's qualified person on the projects as required under NI 43-101 and has prepared the technical information contained above.

San Martin properties – Queretaro, Mexico

The San Martin mine properties are comprised of mining concessions covering 13,077 hectares. In addition to the ongoing mine exploration and development that is currently being performed in development of the mine, management is continually assessing the potential for further exploration and development of the San Martin properties and continually modifying the exploration budget accordingly.

The mine operates two underground and one surface drill rigs to provide information to assist with mine planning in addition to exploration, with the intent of increasing the reserves and resources on the property, and the Company is budgeting targets of approximately 10,000 metres of underground development and exploration drilling in calendar 2022.

At the San Martin Mine we have committed an additional \$1 million to the current exploration budget which will be applied in three different areas beyond budgeted exploration for this year, which is focused on finding the extension of the current mineralization. The additional exploration will be carried out with over 300 meters of diamond drill holes oriented toward the north zone following the trend of the high-grade mineralization mined over the past 30 years of San Martin operation. We will also extend exploration to the eastern and western directions, looking for new areas with high probabilities of mineralization based on the new geological interpretations mapped out by our internal team of geologists and external consultants using more advanced tools at our disposal.

“This quarter's production was very similar to the previous quarter (2022 - Q4) that confirmed the stability of the mine production and reflects the intensive exploration carried out this year. As a result, we are encouraged to continue increasing the investment in exploration as demonstrated by the \$2 million exploration budget recently approved by the BOD of Starcore to be applied in exploration of the San Martin mine and other projects in Mexico, beginning next quarter. This approach is all aligned with our strategy to produce profitable ounces day by day.” stated Salvador Garcia, Chief Operating Officer of the Company.

San Martin Production	<u>Q1 2023</u>	<u>Q4 2022</u>	<u>Q/Q Change</u>	<u>YTD 2023</u>	<u>YTD 2022</u>	<u>Y/Y Change</u>
Ore Milled (Tonnes)	55,263	55,378	0%	55,263	56,287	-2%
Gold Equivalent Ounces	2,925	2,900	1%	2,925	2,895	1%
Gold Grade (Grams/Ton)	1.70	1.65	3%	1.70	1.64	4%
Silver Grade (Grams/Ton)	21.29	27.15	-22%	21.29	20.84	2%
Gold Recovery (%)	89.43	88.64	1%	89.43	88.34	1%
Silver Recovery (%)	49.13	52.26	-6%	49.13	52.11	-6%
Gold: Silver Ratio	85.98	78.23		85.98	68.55	

Salvador Garcia, Chief Operating Officer, is the Company's qualified person under NI 43-101, and has reviewed and approved the scientific and technical disclosure on the San Martin Mine disclosed in this MD&A.

Creston Moly

On February 19, 2015, the Company acquired all of the shares of Creston Moly from Deloitte Restructuring Inc. in its capacity as trustee in bankruptcy of Mercator Minerals Ltd. at a purchase price of CDN \$2 Million. In June, 2011, Mercator Minerals Ltd. (“Mercator”), a TSX listed company, acquired Creston Moly in a cash and shares deal valuing Creston Moly at approximately \$194 million. BMO Capital Markets, financial advisor to Creston Moly and its Board, provided a fairness opinion to the effect that the consideration (of \$194 million) was fair, from a financial point of view, to the shareholders of

Creston Moly.¹ The most significant asset in this acquisition was the El Creston project in Sonora, Mexico which had been advanced to a completed Preliminary Economic Assessment ("PEA"). Creston Moly is a British Columbia company that owns, through its subsidiaries, a 100% interest in the following properties:

El Creston Project, Sonora, Mexico²

The El Creston molybdenum property is located in the State of Sonora, Mexico, 175 kilometres south of the US Border and 145 kilometers northeast of the city of Hermosillo. In 2010, a PEA was prepared on the property based on zones of porphyry-style molybdenum ("Mo")/Copper ("Cu") mineralization by an independent consulting firm. The result of this study indicated that the El Creston molybdenum-copper deposit had a US \$561.9million net present value after tax (using an 8% discount rate). The internal rate of return (after tax) was calculated to be 22.3% and a capital cost payback was calculated to be four years. Other highlights of the report include:

- **Large moly-copper deposit in a mining-friendly jurisdiction.** Total Measured and Indicated Resources of 215 million tonnes grading 0.071% Mo and 0.06% Cu, containing 336 Mlbs Mo and 281 Mlbs Cu. Mineral resources that are not mineral reserves do not have demonstrated economic viability;
- **Initial Capital cost:** US\$655.9million with payback of 4 years, based on metal prices of \$15/lb Mo and \$2.60/lb Cu. Metal recoveries were estimated at 88% for Mo and 84% for Cu;
- **Low Operating Cost:** operating cost of \$US4.12/lb Mo, net of copper credits, 0.84:1 waste to ore strip ratio within an optimized pit containing an additional 7.6 million tonnes of Inferred Resources responsible for \$20M of the NPV;
- **Excellent infrastructure:** Road accessible with a 230kV power grid within 50 km;
- **Apart from the PEA,** recommendations have been made to test known mineralization below the current pit-limiting "Creston Fault" where results such as drill hole EC08-54 returned 241.4m at 0.083% Mo and 0.059% Cu to a depth of 495m in the Red Hill Deep zone.

David Visagie, P.Geo., an independent consultant, is the Company's qualified person under NI 43-101, and has reviewed and approved the scientific and technical disclosure on the El Creston Project disclosed in this report.

Ajax, British Columbia, Canada³

Ajax Molybdenum Property is comprised of 11,718 hectares and is located 13 km north of Alice Arm, British Columbia. The Ajax Property, one of North America's largest undeveloped molybdenum deposits occupying a surface area of approximately 600 by 650 metres, is a world class primary molybdenum property in the advanced stage of exploration.

Recent work performed

Starcore announced the results of an eight-day prospecting, soil and rock chip sampling program completed at its Ajax Property located 15 km north of Kitsault in northwestern B.C.'s well-known mineralized belt, the "Golden Triangle". The property, measuring 1718.65 hectares in size, was acquired by Starcore in 2015 through its purchase of Creston Moly Corp. and its subsidiary Tenajon Resources Corp. The property hosts the very large Ajax porphyry molybdenum occurrence that has been tested by 48 drill holes, beginning in the mid 1960's. During Starcore's September, 2021 limited field program,

¹ The information in this report relating to the acquisition of Creston Moly by Mercator has been drawn from documents filed under the Creston Moly Corp. issuer profile on SEDAR, more specifically: Creston's Management Information Circular dated May 9, 2011 and filed on SEDAR on May 16, 2011, and Creston's news release of June 6, 2011 as filed on SEDAR on June 7, 2011.

² The technical information in this MD&A relating to the El Creston Project is based on the technical report entitled "Preliminary Economic Assessment, El Creston Project, Opodepe, Sonora, Mexico", dated December 16, 2010, filed under the Creston Moly Corp. issuer profile on SEDAR.. Information regarding the effective date of the mineral resources, key assumptions, parameters and methods used to estimate the mineral resources, and known risks that materially affect the mineral resources can be found in the technical report. The PEA provides information on El Creston that is historical and the Company cannot guarantee the accuracy of the data presented therein. The reader is cautioned not to place undue reliance on the historical data or its implications that have been derived from third-party sources. The PEA is referenced herein solely for historic context and background.

³ Technical information in this report relating to the Ajax Project is based on the NI 43-101 Resource Estimate Press Release entitled "Tenajon Announces 75% Increase in Indicated Molybdenum Resources at Ajax Project", dated May 15, 2008 and the technical report entitled "Update of Resource Estimation, Ajax Property, Alice Arm, British Columbia", dated April 18, 2007, both of which are filed under the Tenajon Resources Corp. issuer profile on SEDAR.

rock and soil sampling have revealed the potential for precious and base metal potential beyond the limits of the known molybdenum mineralization.

Three rock samples collected from mineralization exposed in old pits along the south spine of Mt. McGuire, about 1.3 km from the known molybdenum mineralization, assayed up to 4.1 grams per tonne (g/t) silver, 0.23% copper, over limit for analysis method (greater than 100 g/t) tungsten and 794 g/t cobalt. In addition, two quartz veins sampled downslope from these pits assayed over limit (greater than 100 g/t) silver and over limit (greater than 1%) lead and zinc and over limit (greater than 0.2%) bismuth. These samples have been resubmitted to the lab for analyses using an ore grade methodology. Mineralization sampled in the vicinity of a documented BC MINFILE occurrence Ida, northeast of Mt. McGuire peak, assayed over limit (greater than 100 g/t) tungsten, 1.1 g/t silver and anomalous molybdenum and copper.

Soil sampling during the 2021 fieldwork identified two areas to the southwest of the known molybdenum mineralization. The North Anomaly, as defined by the 50 ppm molybdenum in soil contour, is 300 metres (m) long by 500 m wide. It trends westerly and is open along strike to the east and west. The South Anomaly is a 700 m long and open up to 500 m wide, east-west trend of anomalous gold, silver, copper, lead, zinc, cobalt and arsenic in-soil values.

Starcore is planning additional fieldwork for 2022 to further explore the potential of the higher level porphyry mineralization discovered in 2021.

Ian Webster P.Geo. is the Qualified Person, as defined by National Instrument 43-101, who has reviewed and approved the technical contents of this release.

Opodepe Project, Sonora State, Mexico

The Company announced the start of DDH exploration on its MEZTLI 4 and TEOCUITLA claims located in Opodepe, Sonora, Mexico (see Fig.1). This first stage explores five different veins that were discovered after more than eight months of geological works with more than 2000 samples taken (see Fig. 2). As reported in its news release of August 17, 2021, the Opodepe project represents a three-dimensional prospect for Starcore with possibilities as a moly deposit, or as a property with gold showings, and thirdly as a project with the potential for copper porphyry at depth. These concessions of 11,364 hectares (the MEZTLI 4 claims) have never been explored for precious metals. With the acquisition of 3,087 hectares northwest of the MEZTLI 4 claims (the TEOCUITLA concessions), Starcore now has a total of 14,451 hectares to explore, with five veins identified thus far for the initial stage of drilling.

Fig. 3 TABLE OF ASSAYS LAB RESULTS

Salvador Garcia, B. Eng., a director of the Company and Chief Operating Officer, is the Company’s qualified person on the project as required under NI 43-101 and has prepared the technical information contained above.

Scottie Claims Royalty, Canada

Pursuant to the acquisition of Tenajon as part of the Creston Moly acquisition above, the Company acquired a 3% NSR in the Scottie gold claims located in B.C. Starcore and Scottie Resources Corp. (“Scottie”) announced that Scottie has acquired the 3% net smelter royalty interest (“NSR”) attached to the Summit Lake Property in the Skeena Mining Division of British Columbia from Tenajon Resources Corp., Starcore’s wholly-owned subsidiary, in consideration of \$1.6 million. As the NSR was not allocated a value on purchase of Creston, the full amount is shown as a gain on the consolidated statement of operations and comprehensive income (loss) for the year ended April 30, 2022.

Toiyabe, Nevada, USA

The Company had the rights to a 100% undivided interest in the Toiyabe Gold Project (“Toiyabe”), subject to a 3% net smelter revenue royalty (“NSR”), consisting of 165 mining claims located in Lander County, Nevada, United States of America. During the year ended April 30, 2021, the Company entered into a binding agreement with Westward Gold Inc. (formerly IM Exploration Inc.) (“WG”) for the assignment of the Company’s option to acquire a 100% interest in Toiyabe from the Optionor. The Company has transferred all of its rights and WG will assumed all property claim and maintenance payments and all obligations under the current option agreement with Optionor. As consideration for the transfer of the Company’s option to acquire Toiyabe, WG made a cash payment of US\$150,000 and issued the Company 4,100,000 common shares in the capital of WG which were received by our escrow agent and valued at fair market value at date of issue of \$0.19 per share subject to a contractual escrow period of twelve (12) months (currently all of the shares have been released).

Impairment of Mining Interest

In determining the recoverable amounts of the Company’s mining interests, the Company’s management makes estimates of the discounted future cash flows expected to be derived from the Company’s mining properties, costs to sell the mining properties and the appropriate discount rate. The projected cash flows are significantly affected by changes in assumptions about gold’s selling price, future capital expenditures, changes in the amount of recoverable reserves, resources, and exploration potential, production cost estimates, discount rates and exchange rates.

4.3 Results of Operations

The Company recorded loss for the period ended July 31, 2022 of \$657 compared with earnings of \$935 for the comparative period ended July 31, 2021. The details of the Company’s operating results and related revenues and expenses are as follows:

For the period ended July 31,	2022	2021	Variance
Revenues			
Mined ore	\$ 6,750	\$ 6,161	\$ 589
Cost of Sales			
Mined ore	(4,716)	(3,816)	(900)
Depreciation and depletion	(987)	(781)	(206)
Total Cost of Sales	(5,703)	(4,597)	(1,106)
Earnings from mining operations	1,047	1,564	(517)
Financing costs (net)	(49)	(44)	(5)
Foreign exchange gain	29	462	(433)
Management and director fees and salaries	(624)	(457)	(167)
Office and administration	(248)	(228)	(20)
Professional and consulting fees	(287)	(87)	(200)
Pre-exploration costs	-	(10)	9
Shareholder relations	(224)	(126)	(98)
Transfer agent and regulatory fees	(32)	(20)	(12)
Earnings (loss) before taxes and other losses	(388)	1,054	(1,443)
Other losses			
Unrealized loss on investment	(103)	-	(103)
Loss on sale of exploration property	-	(39)	39
Income taxes			
Deferred expense	(166)	(80)	(86)
Earnings (loss) for the period	\$ (657)	\$ 935	\$ (1,592)

Overall, revenue from mining operations increased by \$589 for the period ended July 31, 2022 compared to the comparative period ended July 31, 2021, due mainly to higher metal production from a combination of higher ore grade and recovery in the current period compared to the prior comparable period.

Sales of metals for mining operations for the period ended July 31, 2022 approximated 2,720 ounces of gold and 19,154 ounces of silver sold at average prices in the period of US\$1,806 and US\$21.10 per ounce, respectively. This is an increase in sale of gold ounces when compared to the prior comparable period ended July 31, 2021 where sales of metal approximated 2,327 ounces of gold and 19,810 ounces of silver, sold at higher average prices of US\$1,820 per ounce for gold and higher average prices of US\$26.33 per ounce for silver.

The total cost of sales above includes non-cash expenses for depreciation and depletion of \$987 compared to \$781 in the prior comparable period ending July 31, 2021, which is calculated based on the units of production from the mine over the expected mine production as a denominator. This calculation is based solely on the San Martin mine proven and probable reserves and a percentage of inferred resources in accordance with the Company's policy of recognizing the value of expected Resources which will be converted to Proven and Probable Reserves, as assessed by management. The increase is largely due to higher amortization costs in the current period of the leases on mobile equipment in accordance with the change to IFRS 16.

For the period ending July 31, 2022, the Company had gross profit of \$1,047 from mine operations compared to gross profit of \$1,564 for the period ended July 31, 2022. The lower gross profit was due mainly to higher mine operating costs per tonne during this period and to higher depreciation charges of \$206, despite lower tonnes processed, based on a higher CAPEX base.

Other Items

Changes in other items for the period ended July 31, 2022, resulted in the following significant changes from the period ended July 31, 2021:

- Management fees and salaries increased by \$167 due to the addition of the president in the 4th quarter of fiscal 2022 and to accrual of RSU/ DSU expenses based on the new allocations made in fiscal 2022 which fluctuates with our share price;
- Foreign exchange gain decreased by \$433 for the period ended July 31, 2022. The decrease relates primarily to the fluctuations of the Mexican peso and Canadian dollar in relation to the US dollar, the functional currency of the mining operations, and may be realized or unrealized at the period end;
- Professional and consulting fees increased by \$200 to \$287 for the period ended July 31, 2022. Professional fees relate primarily to charges in relations to legal, tax and audit fees and increased mainly due to corporate activity and the acquisition of claims in the Opodepe Project;
- Shareholder relations increased by \$98 in the current period due to an increase in marketing expenses associated with European markets;
- Deferred Income Tax ("DIT") expense increased by \$86 due mainly to the difference in asset base of the underlying amounts that determine the temporary differences from year to year and utilization of losses in the prior period against taxable income.

All-in Sustaining Costs

In conjunction with a non-GAAP initiative being undertaken within the gold mining industry, the Company has adopted an "all-in sustaining cash cost" ("AISC") non-GAAP performance measure that the Company believes more fully defines the total costs associated with producing gold; however this performance measure has no standardized meaning. As the measure seeks to reflect the full cost of equivalent gold production from current mining operations, new project capital is not included in the calculation. This measure includes San Martin mining operations coupled with related capital costs. Accordingly it is intended to provide additional information and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with GAAP. The Company reports this measure on a sales basis based solely on sales of metal from the San Martin mining operations:

<i>(In Canadian Dollars unless indicated)</i> For the period ended July 31,	Sustaining Costs (in 000's)		Sustaining Costs Per Ounce (in \$/oz)	
	2022	2021	2022	2021
Total cost of sales cash costs ¹	\$ 4,716	\$ 3,816	\$ 1,602	\$ 1,461
Total corporate and administration cash costs ^{1,2}	1,395	862	474	330
Foreign exchange (gain)/loss	29	(462)	10	(177)
Reclamation and closure accretion	47	(57)	15	(22)
Sustaining capital expenditures and exploration	(890)	296	(302)	113
All-in sustaining cash costs	5,297	4,455	1,799	1,705
Foreign exchange adjustment	(1,180)	(831)	(401)	(318)
All-in sustaining USD cash costs	\$ 4,117	\$ 3,624	\$ 1,398	\$ 1,387
Total equivalent ounces sold	2,944	2,613		

¹ Excludes non-cash depletion and depreciation of \$825 from cost of sales and from corporate and administration costs for the period ended July 31, 2022 (July 31, 2021: \$713).

² Includes share-based compensation of \$141 for the period ended July 31, 2022 (July 31, 2021: \$24).

The AISC of US\$1,398/EqOz is higher than the prior period comparable amount of US\$1,387/EqOz due mainly to the higher costs of production and development coupled with additional sustaining exploration costs, offset partially by higher metal production as the denominator. Overall mine costs were also higher averaging US\$67/t, compared to US\$61/t in the prior period due mainly to higher input costs for labour, electricity and fuel in the current period coupled with higher development costs per meter and to a less favourable exchange rate.

Cash Flows

Cash outflow from operating activities was \$201 during the period ended July 31, 2022, compared to a cash inflow of \$1,253 for the comparative period ended July 31, 2021. Cash flows from operating activities were determined by removing non-cash expenses from the earnings and adjusting for non-cash working capital amounts. Financing activities resulted in an inflow of \$980 (July 31, 2021: outflow of \$100) due to the financing. Cash outflow from investing activities was \$329 due to the Company spending \$104 on investment in mining interest and plant and equipment, \$225 on investment in exploration and evaluation assets. Overall cash increased during the period ended July 31, 2022 by \$450.

Investor Relations Activities

During the period ended July 31, 2022, the Company responded directly to investor inquiries.

Financings, Principal Purposes & Milestones

During the period ended July 31, 2022, the Company completed a non-brokered private placement for \$1,200,000 upon the issuance of 6,000,000 units (the "Units") at a price of \$0.20 per Unit. Each Unit is comprised of one common share of the Company and one-half of one transferable common share purchase warrant (the "Warrants"), each whole Warrant exercisable for a period of four years from the date of issue to purchase one common share of the Company at a price of \$0.30 per share, provided that, if after the expiry of all resale restrictions, the closing price of the Company's shares is equal to or greater than \$0.40 per share for 20 consecutive trading days, the Company may, by notice to the Warrant holders reduce the remaining exercise period of the Warrants to not less than 30 days following the date of such notice.

The Company paid \$47,000 as a finder's fee for the portion of the financing attributable to the finder's efforts. All of the securities issued pursuant to this private placement will have a hold period expiring four months plus one day after the closing date.

5. Summary of Quarterly Results

The following is a summary of the Company's financial results for the eight most recently completed quarters:

	Q1 31-Jul-22	Q4 30-Apr-22	Q3 31-Jan-22	Q2 31-Oct-21
Total Revenue	\$ 6,750	\$ 7,459	\$ 5,387	\$ 6,672
Earnings from mining operations	\$ 1,047	\$ 1,956	\$ 420	\$ 1,366
Earnings (loss) for period	\$ (657)	\$ 2,179	\$ (391)	\$ (318)
Per share – basic and diluted	\$ (0.01)	\$ 0.05	\$ (0.01)	\$ 0.00

	Q1 31-Jul-21	Q4 30-Apr-21	Q3 31-Jan-21	Q2 31-Oct-20
Total Revenue	\$ 6,161	\$ 5,123	\$ 6,614	\$ 6,972
Earnings from mining operations	\$ 1,564	\$ 15	\$ 1,236	\$ 2,225
Earnings (loss) for period	\$ 935	\$ (875)	\$ 651	\$ 1,452
Per share – basic and diluted	\$ 0.02	\$ (0.02)	\$ 0.01	\$ 0.03

Discussion

The Company reports a loss of \$657 for the quarter ending July 31, 2022 compared to earnings of \$935 in the comparative quarter ended July 31, 2021. For more detailed discussion on the quarterly production results and financial results for the quarter ended July 31, 2022, please refer to *Sections 4.1 and 4.3 under "Results of Operations"*.

6. Liquidity and Commitments

The Company expects to continue to receive income and cash flows from the mining operations at San Martin (*section 4.1*). Management expects that this will result in sufficient working capital and liquidity for the Company for the next twelve months.

As at July 31, 2022, the Company had the following commitments:

- The Company has a land rental commitment with respect to the land at the mine site, for \$132 per year which is currently being renegotiated. The Company also has ongoing concession commitments on the mine site and on exploration and evaluation assets of approximately \$700 per year.
- The Company has management contracts to officers and directors totaling \$600 and US\$315 per year, payable monthly, expiring in April 2024 and US\$400 per year until December 2023.

Obligations due within twelve months of July 31,	2022	2023	2024	2025 and beyond
Trade and other payables	\$ 2,732	\$ -	\$ -	\$ -
Reclamation and closure obligations	\$ -	\$ -	\$ -	\$ 4,019

7. Capital Resources

The capital resources of the Company are the mining interests, plant and equipment, with an amortized historical cost of \$29,006 as at July 31, 2022. The Company is committed to further expenditures of capital required to maintain and to further develop the San Martin mine which management believes will be funded directly from the operating cash flows of the mine.

8. Off Balance Sheet Arrangements

The Company has no off-balance sheet transactions.

9. Transactions with Related Parties

N/A

10. First Quarter

Due to mine operating activity of the San Martin mine discussed throughout this MD&A and as detailed in Section 4.1, the operations and activities are similar to previous quarters, which are discussed in *Section 4.3 – Results of Operations*.

11. Proposed Transactions

N/A

12. Critical Accounting Estimates

The Company makes estimates and assumptions about the future that affect the reported amounts of assets and liabilities. Estimates and judgements are continually evaluated based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances. In the future, actual experience may differ from these estimates and assumptions.

The effect of a change in accounting estimate is recognized prospectively by including it in the Company's profit or loss in the period of the change, if it affects that period only, or in the period of the change and future periods, if it affects both.

Information about critical judgements in applying accounting policies that have the most significant risk of causing material adjustment to the carrying amounts of assets and liabilities recognized in the consolidated financial statements within the current financial period are discussed below:

a) Economic Recoverability and Profitability of Future Economic Benefits of Mining Interests

Management has determined that mining interests, evaluation, development and related costs incurred which have been capitalized are economically recoverable. Management uses several criteria in its assessments of economic recoverability and probability of future economic benefit including geologic and metallurgic information, history of conversion of mineral deposits to proven and probable reserves, scoping and feasibility studies, accessible facilities, existing permits and life of mine plans.

b) Rehabilitation Provisions

Rehabilitation provisions have been created based on the Company's internal estimates. Assumptions, based on the current economic environment, have been made which management believes are a reasonable basis upon which to estimate the future liability. These estimates take into account any material changes to the assumptions that occur when reviewed regularly by management. Estimates are reviewed annually and are based on current regulatory requirements. Significant changes in estimates of contamination, restoration standards and techniques will result in changes to provisions from period to period.

Actual rehabilitation costs will ultimately depend on future market prices for the rehabilitation costs, which will reflect the market condition at the time that the rehabilitation costs are actually incurred. The final cost of the currently recognized rehabilitation provision may be higher or lower than currently provided. The inflation rate applied to estimated future rehabilitation and closure costs is 7.65% (April 30, 2022: 7.65%) and the discount rate currently applied in the calculation of the net present value of the provision is 10% (April 30, 2022: 10%).

c) Impairments

The Company assesses its mining interest, plant and equipment assets annually to determine whether any indication of impairment exists. Where an indicator of impairment exists, a formal estimate of the recoverable amount is made, which is considered to be the higher of the fair value less costs to sell and value in use. These assessments require the use of estimates and assumptions such as long-term commodity prices, discount rates, future capital requirements, exploration potential and operating performance.

d) Income Taxes

Significant judgment is required in determining the provision for income taxes. There are many transactions and calculations undertaken during the ordinary course of business for which the ultimate tax determination is uncertain. The Company recognizes liabilities and contingencies for anticipated tax audit issues based on the Company's current understanding of tax law. For matters where it is probable that an adjustment will be made, the Company records its best estimate of the tax liability including the related interest and penalties in the current tax provision. Management believes they have adequately provided for the probable outcome of these matters; however, the final outcome may result in a materially different outcome than the amount included in the tax liabilities.

In addition, the Company recognizes deferred tax assets relating to tax losses carried forward to the extent there are sufficient taxable temporary differences (deferred tax liabilities) relating to the same taxation authority and the same taxable entity against which the unused tax losses can be utilized. However, utilization of the tax losses also depends on the ability of the taxable entity to satisfy certain tests at the time the losses are recuperated.

e) Mineral Reserves and Mineral Resource Estimates

Mineral reserves are estimates of the amount of ore that can be economically and legally extracted from the Company's mining properties. The Company estimates its mineral reserve and mineral resources based on information compiled by Qualified Persons as defined by Canadian Securities Administrators National Instrument 43-101 Standards for Disclosure of Mineral Projects. Such information includes geological data on the size, depth and shape of the mineral deposit, and requires complex geological judgments to interpret the data. The estimation of recoverable reserves is based upon factors such as estimates of commodity prices, future capital requirements, and production costs along with geological assumptions and judgments made in estimating the size and grade that comprise the mineral reserves. Changes in the mining reserve or mineral resource estimates may impact the carrying value of mineral properties and deferred development costs, property, plant and equipment, provision for site reclamation and closure, recognition of deferred income tax assets and depreciation and amortization charges.

f) Units of Production Depletion and Depreciation

Estimated recoverable reserves are used in determining the depreciation of mine specific assets. This results in depreciation charges proportional to the depletion of the anticipated remaining life of mine production. Each item's life, which is assessed annually, has regard to both its physical life limitations and to present assessments of economically recoverable reserves of the mine property at which the asset is located. These calculations require the use of estimates and assumption, including the amount of recoverable reserves and estimate of future capital expenditure. Changes are accounted for prospectively.

13. Changes in Accounting Policies

N/A

14. Financial and Other Instruments

All significant financial assets, financial liabilities and equity instruments of the Company are either recognized or disclosed in the audited consolidated financial statements together with other information relevant for making a reasonable assessment of future cash flows, interest rate risk and credit risk. Where practicable the fair values of financial assets and financial liabilities have been determined and disclosed; otherwise only available information pertinent to fair value has been disclosed.

In the normal course of business, the Company's assets, liabilities and forecasted transactions are impacted by various market risks, including currency risks associated with inventory, revenues, cost of sales, capital expenditures, interest earned on cash and the interest rate risk associated with floating rate debt.

Currency risk is the risk to the Company's earnings that arises from fluctuations of foreign exchange rates and the degree of volatility of these rates. The primary currency the Company exposed to is the United States dollar which is also the functional currency of the San Martin Mine. The Company does not use derivative instruments to reduce its exposure to foreign currency risk. At July 31, 2022 the Company had the following financial assets and liabilities denominated in CDN and denominated in Mexican Pesos:

In '000 of	CAD\$	MXN\$
Cash	\$ 2,541	MP 8,835
Other working capital amounts – net	\$ (387)	MP (14,772)

At July 31, 2022, US dollar amounts were converted at a rate of \$1.2809 Canadian dollars to \$1 US dollar and MP were converted at a rate of MP20.3679 to \$1 US Dollar.

15.1 **Disclosure of Outstanding Share Capital as at September 13, 2022**

	Number	Book Value
Common Shares	55,646,851	\$ 51,878

There are *no options outstanding nor any granted subsequent to July 31, 2022.*

During the period ending July 31, 2022, 3,000,000 warrants were issued as discussed in “4.3 *Results of Operations - Financings, Principal Purposes & Milestones*”.

15.2 **Disclosure Controls and Procedures**

The Company’s management, with the participation of its Chief Executive Officer and Chief Financial Officer, has evaluated the effectiveness of the Company’s disclosure controls and procedures. Based upon the results of that evaluation, the Company’s Chief Executive Officer and Chief Financial Officer have concluded that, as of the end of the period covered by this report, the Company’s disclosure controls and procedures were effective to provide reasonable assurance that the information required to be disclosed by the Company in reports it files is recorded, processed, summarized and reported, within the appropriate time periods and forms.

Internal Controls Over Financial Reporting

The Company’s management, with the participation of its Chief Executive Officer and Chief Financial Officer, are responsible for establishing and maintaining adequate internal control over financial reporting. Under the supervision of the Chief Financial Officer, the Company’s internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of audited consolidated financial statements for external purposes in accordance with IFRS. The Company’s controls include policies and procedures that:

- pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the Company;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation of consolidated financial statements in accordance with IFRS; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Company’s assets that could have a material effect on the annual consolidated financial statements or interim financial statements.

There has been no material change in the Company’s internal control over financial reporting during the Company’s period ended July 31, 2022.

Limitations of Controls and Procedures

The Company’s management, including the Chief Executive Officer and Chief Financial Officer, believe that any disclosure controls and procedures or internal controls over financial reporting, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, they cannot provide absolute assurance that all control issues and instances of fraud, if any, within the Company have been prevented or detected. These inherent limitations include the realities that judgments in decision-making can be faulty, and that breakdowns can occur because of simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by

unauthorized override of the control. The design of any systems of controls also is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Accordingly, because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected.
